

# Steps to obtain HTTP endpoint for Azure Cloud Function

1. Navigate to Azure Portal at: <https://portal.azure.com/>
2. Sign in using your credentials
3. Once in the Azure Portal, click the cloud function that you want to get the HTTPS URL

4. The URL can be found as below:

5. Copy this URL and append it with the cloud function name, you'll get something like:

<https://lnp-funciton-linux.azurewebsites.net/api/LinuxLnPFunction>

(this is just a sample for reference)

6. Put this URL in the  
/workload.smoothen/src/main/resources/application.properties –  
“azure.factorial.url” key
